

**FOR IMMEDIATE RELEASE**

RINA Technologies, LLC. announces release of Portfolio Maestro® 1.5 software platform with Bloomberg Desktop API.

CINCINNATI, Ohio, November 19, 2009 -- RINA Technologies, LLC, announced the release of Portfolio Maestro version 1.5 which provides Bloomberg data via Bloomberg Desktop API, and includes several other key enhancements. Portfolio Maestro now connects its powerful backtesting and real-time trading signal generation capabilities with an excellent source of global pricing across a variety of asset classes enabling traders to discover new trading opportunities. RINA Technologies' clients that choose to leverage the Bloomberg Desktop API with Portfolio Maestro will benefit from the broad scope and quality of Bloomberg data, as well as increased efficiency and robustness in data acquisition.

Leo Zamansky, President of RINA Technologies, commented that "We are excited to offer Bloomberg data with our Portfolio Maestro product. Now users of the BLOOMBERG PROFESSIONAL® service can develop and test their quantitative strategies on portfolios using Portfolio Maestro. Today investment managers, such as hedge funds, proprietary traders and commodity trading advisors need to be able to test their strategies using accurate, scalable, and cost-effective market data. We have integrated Bloomberg Desktop API with Portfolio Maestro to address these challenges and to meet the increasing demand for Bloomberg data from our clients."

In addition to the Bloomberg Desktop API integration, Portfolio Maestro 1.5 includes other key enhancements such as the application of genetic algorithms to trading model optimization for strategies written in any .NET language and several new performance reports and charts.

About RINA Technologies, LLC.

RINA Technologies is a Cincinnati, Ohio based software company focused on developing solutions for the global quantitative trading community. RINA Technologies' core technology and product offering is Portfolio Maestro - a state-of the art trading platform for portfolio testing, signal generation and order execution.
